Evening Brief

Date Stamp: Wednesday July 5, 2017

Weather Summary

...HIGH RISK for Scattered Monsoonal Thunderstorms Wed-Fri...

Hot temperatures will continue through the weekend across the Great Basin under strong high pressure with most valleys approaching or exceeding 100 degrees.

The first push of monsoon moisture will begin to move north into the Great Basin today and increase through the weekend and next week. Initially today thunderstorms will develop along the Sierra Front and over far Southern Nevada, with isolated lightning continuing across parts of ID/WY and the eastern half of UT. Thunderstorms will become more numerous and increase in areal coverage to the east Thursday/Friday then expand to the north as well this weekend. Storms will be a mix of wet and dry and be faster moving on the western side of the ridge across Nevada this week. Deeper moisture will work its way north later this weekend into next week with better chances of more widespread wetter storms.

We have issued **High Risk** for mid to late week from west to east...but held off extending the high risk into the weekend, due to the uncertainty of how much fuels may moisten from increased thunderstorm activity. Timing and locations may change through the week. Stay tuned for further updates.

Preparedness Levels

National	3

Great Basin Fire Potential Summary

Fine fuels, which have been the main contributor to fire spread early this season in the north and west, continue to dry out quickly across the Great Basin. Higher than normal fine fuel loading and continuity exists over the northern half of the Great Basin. ERCs have now climbed to the 90th-97th percentile over southern and eastern NV/UT and the AZ Strip and are **near record highs in some areas**, with more advanced fire behavior on ongoing fires in southern Utah.

Further north ERCs also continue to increase and dry out...mostly in the 60th to 70th percentile with a few drier pockets. Sagebrush live fuel moisture is still near normal across the northern and western portions of the Great Basin, but is on the downward trend. Sagebrush live fuel moisture across Utah has dropped significantly to below normal and in some areas is approaching record lows.

Resources:

- Crews: 14 T1 IHCs in GB, 14 committed.
- T1 IMT Team 2 - Martin committed to Brianhead fire.
- T2 IMT Team 6 - Chadwick committed to Earthstone fire.
- T3 IMT Thaler committed to Dry Gulch fire.
- T3 IMT Hecht committed to Limerick fire.

Great Basin
Coordination Center

- Local IA resources are at drawdown for UT and NV.
- GBCC has committed an estimated 70+ type 3, 4, 6 engines.
- 1-T1 and 0-T2 helicopters are available in GACC.

Great Basin Fire Activity: Moderate Activity

New Fires and Acres: 66 fires for 7657.7 acres. 34,551 acres large fire growth.
